

First full pro season: 116 innings, and two different pitchers. High-A: 4.52 ERA on 29.4 K% / 5.6 BB% and 30.8% whiff. AA after the July promotion: 6.41 ERA, 19.1 K%, 13 HR in 46.1 IP, 29.9% line drives. The strike-throwing traveled (62.7% first-pitch strike at AA); the swing-and-miss didn't, and the homers exploded — 9 in August alone.

WHO HE WAS IN 2026

- High-A was a strikeout machine: 90 K in 69.2 IP, 32.2% CSW, 26.3% put-away, 5.6 BB%. Righties: 32.6 K%.
- AA hit everything hard: .348 AVG vs R, .324 vs L, 13 HR in 209 PA — 6 to lefties in 79 PA. Whiff fell 30.8% → 20.4%, put-away 26.3% → 18.6%. The 9-HR August (101 PA) and 4-HR 9/10 start are the season's wound.
- Walks stayed low at both levels (5.6% / 8.1%) — the ball is in the zone; at AA it was in the wrong part of it. BABIP .381 for the year is partly luck, mostly contact quality.
- Late-season fatigue is a fair hypothesis: K% by month at AA went 18.8 → 20.8 → 15.9 across his first 116-IP season (college max was far lower). Velo trend is unmeasured publicly — the lab reads it.
- At 5'10" the release is low and public reports have the fastball up to 99-100 with ride — a shape that plays up in the zone if it stays up; at AA it didn't.
- No public pitch tracking exists at Hillsboro or Amarillo in 2026; arsenal below is from public scouting descriptions.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Full TrackMan + Edgertonic arsenal capture — no public shapes exist. We need velo, IVB, release height and VAA on the four-seam to know why AA lifted it.
- Delivery capture on a compact 5'10" frame: extension and release height are the levers; check trunk tilt and whether the late-season version lost either.
- Post-116-IP physical assessment — first full pro workload.

PITCH SHAPES & GRIPS

- Four-seam location is the fix before shape: a rising fastball from a low slot only works at the top of the zone; 13 HR / 30% line drives says it lived middle. Vertical location charted every pen.
- LHH pitch: 6 HR in 79 AA PA to lefties. Build the changeup (or a sinker with run) as a real second look; success = LHH xwOBA under .330 in live ABs.
- Define the slider vs cutter lanes — two glove-side pitches within 5 mph blur together at AA; give each a distinct shape or drop one.

STRENGTH & WORKOUTS

- Conditioning for 150 IP is the winter: the AA fade pattern is consistent with a first-year workload wall. Aerobic base + strength maintenance, not a velo chase.
- Hip/trunk mobility for a low-slot, high-ride delivery to hold extension deep into a season.

BULLPENS & PLAN

- Location pens: four-seam top-third only, charted by height; anything below the belt is a miss.
- Changeup 30% of pens until it has a shape.
- Live ABs vs LHH; then vs RHH with a HR-risk chart (95+ EV, 20-35° LA).

No public pitch tracking for High-A/AA in 2026 — results computed from every plate appearance (515). Reported arsenal from public scouting descriptions, not measurement.
