USAGE BY BATTER SIDE

VELO TREND

FASTBALL VELO BY MONTH (mph)

WHO HE WAS IN 2026

- Four-seam is dead-zone:** 93.8 mph, 13" IVB / 13-14" run from a 22° slot. Whiff was fine (21-23%) but it gave up 4 of the 8 HR and a .369 xwOBA in the majors. He threw it 50%+ of the time vs lefties.
- Sinker is the hidden weapon:** 94.2 mph, 5" IVB / 17.5" run. 28 MLB pitches: 43% CSW, 73% chase, 82 EV. 10% usage. That is the pitch to build the RHH plan around.
- Sweeper had two shapes.** -10" HB at AAA (19.5% whiff, 35% chase) vs -15" at MLB (29% whiff, 35% zone). At 2,650 rpm the spin is there; the release isn't repeating.
- Cutter split the year:** 90.6 with 12" IVB / 3" cut — 35% whiff and 20% hard-hit at AAA, then 0 whiffs and 97 EV on 21 MLB pitches. Small sample, but it is the bridge pitch vs LHH if it holds shape.
- Command was the difference by level:** 2.1 BB% at AAA, 11.3% at MLB; first-pitch strike 48% in the bigs. Location+ 90.
- Velo dipped mid-year:** 94.6 (May) → 92.6 (July) → 93.8 (Aug). Extension is a real asset at 6.4-6.7 ft.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Capture the sweeper release across a pen: the -10" vs -15" split says the hand/forearm position is drifting — find the cue that holds one shape.
- Check for the July velo dip source (trunk rotation timing, lead-leg block) so it doesn't repeat; the 6.5+ ft extension is worth protecting.
- Given his medical history, baseline shoulder/elbow ROM and strength now and re-test monthly.

PITCH SHAPES & GRIPS

- Sinker to 30%+ vs RHH** — it already gets 73% chase; build the arm-side edge command to match.
- Four-seam: either add ride (target 16"+ IVB via seam orientation) or cut usage vs LHH to 35%** and let the cutter (12" IVB / 3" cut) carry the in-zone work vs lefties.
- Pick one sweeper: the -15" MLB version whiffed more; lock it and get zone rate back to 45%.

STRENGTH & WORKOUTS

- Hold 94+ through a full season: 94.6 → 92.6 in two months is a conditioning flag for a reliever with back-to-back days.
- Rotational power and hip-shoulder separation block; he's 200 lb on a 64" frame — room to add mass without losing the extension.

BULLPENS & PLAN

- First-pitch strike is the pen KPI: 48% at MLB, 53% at AAA. Every pen starts with 0-0 counts.
- Sequence pens vs RHH: sinker arm-side → sweeper backfoot → four-seam up. Vs LHH: cutter in → four-seam up → sweeper away.
- Live ABs charted for HR-risk pitches (middle-middle four-seams) — 8 HR in 34.2 IP is the number to kill.

Arsenal combines AAA(398) and MLB(284) tracked pitches. RV/100 and xwOBA weighted across both; Stuff+ / Location+ MLB only.
