

The best swing-and-miss rate in this group (33.4% whiff, 27.2 K%) attached to the worst walk rate in the group (20.2 BB%, 72 BB in 71.2 IP). Moved to the Northwest Arkansas bullpen in late June; K% climbed to 36-41% in August-September but the walks never moved (19-27% every month). 8.04 ERA, 14 HR — 13 of them to righties.

- WHO HE WAS IN 2026
- **Stuff plays:** 33.4% whiff, 22.6% put-away, 97 K in 71.2 IP. Lefties: .218 AVG, 1 HR in 136 PA. When the ball is over the plate, he misses bats.

• **Strikes don't:** 55.4% strike rate, 54.2% first-pitch strike, 20.2 BB%. Monthly BB%: 18 → 15 → 23 → 27 → 21 → 19. Hitters swung at 40.8% of his pitches — the lowest swing rate in this group — because they didn't have to.

• **Righties are the damage:** 13 HR in 220 PA, .263 AVG, 18.6 BB%. The public book is fastball/plus curve; nothing arm-side is pulling righties off the curve.

• **The bullpen move helped the strikeouts, not the walks:** August 36.2 K% / 21.3 BB%; September 40.6 / 18.8.

• **Public reports describe a long arm action** he has been shortening — the walk profile is the classic symptom of a delivery that doesn't repeat.

• **No public pitch tracking for AA in 2026;** arsenal below from public scouting descriptions (2025 velo readings).
- OFFSEASON PLAN — WHAT WE FIX

every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

• Delivery capture is the whole winter: release-point spread on 30 fastballs, arm-path length, timing of foot strike vs arm slot. 20% walks with 33% whiff is a repeatability problem, not a stuff problem.

• Force-plate: measure lead-leg block consistency pitch to pitch — the number that predicts strike% in a long-armed lefty.

• TrackMan arsenal baseline: we have no 2026 velo or shapes.

PITCH SHAPES & GRIPS

• **Nothing new until the strike rate moves.** Simplify to fastball/curve in pens until first-pitch strike is 60%+.

• **Then build the arm-side pitch vs RHH** (changeup, 82-84, 14+ run) — 13 HR to righties is the second problem, and it can't be fixed with the curve.

• Fastball: verify it still sits 92-94; if the ride is there, it belongs up, and the curve tunnels off it.

STRENGTH & WORKOUTS

• Body: 175 lb at 6'3". Mass and strength through the winter is the surest velo and durability lever he has.

• Stability/proprioception work tied to the mocap findings — the command fix lives in the lower half.

BULLPENS & PLAN

• Every pen is a strike pen: 0-0 counts, fastball to a target, charted strike% and miss distance. Target 65% strikes before any shape work.

• Curve for strikes (front-door to RHH) — he needs a get-me-over version, not just the chase version.

• Live ABs charted for walks only until BB% is under 12; then vs RHH for HR risk.

No public pitch tracking for AA in 2026 — results computed from every plate appearance (356). Reported arsenal from public scouting descriptions, not measurement.
