

A full AA starter's year at Montgomery: 126.2 IP, 4.33 ERA — but 23 HR (1.63/9), 17.5 K% and a 5.55 FIP held up by a .264 BABIP and 74.5% strand rate. In 2025 at High-A he was 2.78 ERA / 0.67 HR/9. The jump cost him the strikeouts(K% by month: 25 → 16 → 12 → 15 → 17 → 24) and turned fly balls into homers.

WHO HE WAS IN 2026

- Home runs are the whole line: 23 HR — 11 to lefties, 12 to righties. Fly-ball rate 26.6% isn't extreme; the balls that got up got out. FIP 5.55 vs ERA 4.33.
 - Swing-and-miss disappeared mid-year: 22.9% whiff and 15.9% put-away for the season; June was an 11.6 K% month. He finished strong (24.2 K% in September, 7 K on 9/1).
 - Strike-throwing is real: 7.6 BB%, 62.9% first-pitch strike, 64.4% strike rate. The floor is a strike-thrower; the ceiling depends on a put-away pitch.
- Platoon is even: .244 vs L (278 PA), .254 vs R — no side is protected, which points at pitch quality rather than a missing platoon pitch.
 - Durability was the win: 26 outings, 525 batters, no missed turns — the first full starter's workload of his career.
 - No public pitch tracking exists for AA in 2026. Shapes, velo and spin below are from public scouting descriptions, not measured — the first lab session is the measurement.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- TrackMan + Edgertonic baseline on the mound is step one: we have no shapes, spin or release on him. Full arsenal capture before any plan is set.
- Full delivery capture at 65°: extension, release height, trunk tilt. The K% collapse in June with a healthy walk rate reads like a shape/velo problem, not command.
- Post-126-IP shoulder/elbow ROM and strength baseline.

PITCH SHAPES & GRIPS

- Find the put-away pitch. 15.9% put-away and 22.9% whiff won't survive AAA. Once measured: either sharpen the slider (gyro, 86+) or build a sweeper/splitter with a distinct shape from the fastball.
- Fastball plan is a HR plan: if the four-seam is dead-zone (likely given 23 HR at 44% GB), commit to a sinker/two-seam primary and keep the four-seam up only.
- Changeup usage and shape — an even platoon split with 11 HR to LHH says the arm-side pitch isn't doing its job.

STRENGTH & WORKOUTS

- Velo: whatever the baseline reads, the winter goal is +1.5 mph. Lower-half power and mass on a 65"/218 frame.
- Conditioning for 150 IP — he held up for 126; build the base so the June dip (11.6 K%) doesn't repeat.

BULLPENS & PLAN

- First pen is a measurement pen — every pitch, every grip, no coaching.
- Then two-strike pens: put-away pitch only, charted for whiff and chase.
- Live ABs vs both sides — track HR-risk contact (95+ EV, 20–35° LA) as the KPI.

No public pitch tracking for AA in 2026 — results computed from every plate appearance (529). Reported arsenal is from public scouting descriptions, not measurement.
