

Georgia ace year: 11-2, 3.68 ERA, 95.1 IP, 119 K / 46 BB in 18 starts, a 15-strikeout complete game against Texas at the College World Series (a Georgia CWS record), Third Team All-American, then the White Sox at #77. No official pro innings. The offseason problem is already on our whiteboard: the fastball drifted to a cutter shape and three grip fixes didn't bring it back.

2026 PROFILE

no public pitch tracking at this level — results from every plate appearance; arsenal from public reports

SEASON	G/GS	IP	W-L	ERA	K	BB	NOTES
2026 Georgia (Jr)	18/18	95.1	11-2	3.68	119	46	CWS CG 15 K vs Texas · 3rd Team All-American
2025 Stanford (So)	15/15	70.1	3-4	6.01	56	—	

- WHAT WE NEED IN HAND BEFORE THE FIRST LAB DAY
- 2026 Georgia TrackMan game CSVs (every start) — the fastball-drift timeline by start
 - All 2026 bullpen TrackMan sessions incl. the 7/3 clocking test and the splitter sessions
 - Anything the White Sox sent him (their suggested changes) so the lab plan doesn't fight the org's

REPORTED ARSENAL · not measured

PITCH	VELO	NOTE
Four-seam	mid 90s	2026 shape drifted to cutter (~1" IVB / 1" HB in July pen); slot dropped
Slider	mid 80s	plus; breaks toward 1B
Curveball	low 80s	plus; breaks toward 1B
Splitter (new)	87-88	Gausman grip; 28% eff / 74° gyro — the LHH pitch
Sinker (option)	—	alternative arm-side solution

- WHO HE WAS IN 2026
- Season line is a starter's line:** 119 K in 95.1 IP (11.2 K/9), 4.3 BB/9. Strikeouts came from two plus breaking balls and a fastball that plays despite its shape.
 - The fastball is the whole offseason.** In-season TrackMan showed the four-seam losing ride and arm-side run vs 2025 and drifting toward a cutter; release slot dropped on every pitch. Re-centered four-seam, two-seam and a seam-clocking test all failed to restore it; the July 3 pen read ~1" IVB / 1" HB.
 - Glove-side pitches break toward first base** — away from RHH, in on LHH. That's why the LHH hole is structural, not a command issue.
 - The splitter experiment is the LHH answer:** the Gausman-grip test produced a real splitter (87.6 mph, 28% spin efficiency, 74° gyro, 0.6" IVB). A sinker is the executable alternative given his supination bias.
 - Walks are the college tax:** 46 BB is roughly 11% of batters; with a fastball he can't trust for shape, he'll nibble.
 - The White Sox have given him their own suggestions — we don't know what they told him. First conversation of the winter is aligning those with the lab findings.

OFFSEASON PLAN — WHAT WE FIX

every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Full delivery capture is the first day: the release slot dropped on every pitch in 2026 — we need to know if the drop is mechanical (trunk tilt, shoulder abduction, timing) before another grip is tried.
- Compare a 2025-style delivery cue vs 2026 on force plates and Theia; the fastball shape problem may be a lower-half problem.
- Wrist/forearm mechanics on the Edgertronic — supination bias measured, not assumed.

PITCH SHAPES & GRIPS

- Fastball restore:** after the mocap answer, one variable at a time — slot first, then seam orientation. Target: back to 2025 ride/run. Success only when TrackMan in a live pen shows it three sessions running.
- Splitter build-out:** the tracking sheet is the deliverable; 40+ splitters per week charted for velo, efficiency, gyro and IVB; goal is a repeatable 87-88 with under 3" IVB.
- Sinker as the backup arm-side pitch if the splitter stalls.

STRENGTH & WORKOUTS

- Pro-workload prep: 95 IP as a college junior → a 120-130 IP pro season. Base conditioning, arm care, and mass.
- Shoulder/scap program tied to whatever the mocap says about the slot drop.

BULLPENS & PLAN

- Fastball-only pens until the shape is back — no secondaries until IVB/HB read right.
- Splitter pens second; slider/curve maintenance only.
- Live ABs vs LHH in February — the structural hole is the test.

College season stats from Georgia Athletics. No public pitch tracking; shape notes are from No Brand's own in-season and bullpen TrackMan work.
