

Rookie year in the big-league pen: 27 G, 27 IP, 3.67 ERA on 98-mph heat (Stuff+116) – but 14.2 BB% and 17.5 K% say the results outran the process (xERA 4.43, Location+88). At AAA the same stuff was 37.5 K% / 6.8 BB%. The arm is major-league; the strike-throwing isn't yet.

MOVEMENT (in) · dashed = MLB RHP avg

USAGE BY BATTER SIDE

VELO TREND

WHO HE WAS IN 2026

- Four-seam: 97.9 mph (touched 100.7), 14.6" IVB / 7" run, 6.8 ft extension, VAA -4.2. Elite velo/extension, average shape. AAA hitters whiffed 36%; MLB hitters 23% – because it was in the zone only 51% and they didn't chase (25%). 13 of his 18 walks came on it.
- Sweeper (85.3, 4" / -15.5", 2,630 rpm) is the second pitch: 27% whiff MLB, 39% AAA; 41.5% zone in the bigs. Best chase pitch vs RHH (31% usage).
- Sinker at 98.3 is underused (11%): 54.5% GB, 32% CSW, .246 xwOBA. That's the LHH/ground-ball answer he isn't using (10% vs L).
- Curve (85.9, -6 / -8.5) is a strike pitch, not a weapon: 10.5% whiff, 15% CSW, but .182 xwOBA – hitters take it. The 89-mph gyro slider he showed at AAA (57% whiff on 12 pitches) is the more interesting third pitch.
- Command is the gap: first-pitch strike 59%, overall zone 41-51%, 14.2 BB%. AAA: 62.5% first-pitch strike, 6.8 BB%.
- Velo climbed all year: 97.2 (May) → 97.9 (Aug) → 98.4 (Sep). Health and arm speed are not the problem.

OFFSEASON PLAN — WHAT WE FIX

every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Release repeatability is the capture: measure release-point spread on the four-seam across 30 pitches; the goal is a tighter cluster, not more velo.
- Check lead-leg block timing and trunk stack – 6.8 ft extension at 98 is elite; make sure the command fix doesn't cost either.
- Baseline elbow/shoulder – he added velo in-season as a rookie reliever; that's a workload flag going into a full MLB year.

PITCH SHAPES & GRIPS

- Sinker to 25% vs LHH – it's 98 with 14.6" run and a .246 xwOBA; lefties saw it 10% of the time.
- Four-seam: ride target 16" + IVB via seam orientation so the up-zone pitch misses more bats at MLB (23% → 30%).
- Finish the 89-mph gyro slider as the bridge between 98 and 85 – 57% whiff on 12 AAA pitches is a lead worth chasing.
- Curve becomes a 0-0 / 1-0 strike pitch only.

STRENGTH & WORKOUTS

- Maintain, don't chase: velo is 98-100. The block is mobility, scap/RC durability and recovery for a 60-appearance MLB season.
- Lower-half stability work tied to the mocap findings – a stable front side is the physical side of the command fix.

BULLPENS & PLAN

- Every pen is a command pen: 0-0 and 1-1 counts only, four-seam/sinker to a target, charted as strike% and miss distance.
- Target: 65% first-pitch strike and 55% zone on the four-seam in pens before shape work begins.
- Live ABs vs LHH with the sinker plan (2 HR, .265 AVG vs L).

Arsenal combines AAA(358) and MLB(496) tracked pitches. RV/100 and xwOBA weighted across both; Stuff+/Location+ MLB only.
