

Breakout year: 116.2 innings across High-A (3.75 ERA, 27.5 K%, 7.3 BB%) and a late promotion to Chesapeake (1.96 ERA in 5 starts, 69% ground balls). The stuff is 95-97 touching 99 with two plus breaking balls; the two things that followed him up were homers on the fastball (15 at High-A) and walks when the fastball scatters (12.4 BB% at AA, 14% vs LHH).

WHO HE WAS IN 2026

- High-A was dominant, with one leak:** 106 K in 93.2 IP, 31.2% CSW, 28.7% whiff, 61% first-pitch strike — and 15 HR. Ground-ball rate 55% says the fastball that gets lifted is the four-seam, not the sinker.
- AA told us what worked:** after adding the sinker and a kick change in-season, AA ground-ball rate went to 69.4% with only 8% fly balls. Righties hit .119 with a 34 K%.
- Lefties are the open question:** at AA, 14.0 K% / 14.0 BB% / .326 vs LHH in 50 PA. At High-A he handled them (29.5 K%). The kick change has to become the LHH answer.
- Walks track the fastball:** BB% by month at High-A ran 5 → 16 → 6 → 7 → 3; AA 13 and 11. Public evaluators grade the command 30 now / 40 future and describe the four-seam as poorly shaped.
- Workload was a career high:** 26 starts, 482 batters, 116.2 IP as a 22-year-old — a full year without a missed turn.
- No public pitch tracking exists at High-A Frederick or AA in 2026;** the arsenal below is from public scouting grades. First lab session is the measurement.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Full arsenal capture on TrackMan + Edgertonic — we need the actual four-seam shape and the sinker/four-seam release relationship before touching anything.
- 66" delivery capture: release-point spread across 30 fastballs is the command number; find the lower-half or timing source of the scatter.
- Post-116-IP arm ROM/strength baseline; he's 22 and just doubled his workload.

PITCH SHAPES & GRIPS

- Commit to the sinker as the primary** — the AA ground-ball rate (69%) is the proof. Four-seam becomes the north pitch only, or gets re-oriented for ride if the capture says it's dead-zone.
- Kick change is the offseason build:** target 86-88 with 15+ run off the sinker; success = LHH xwOBA under .320 and BB% under 10 vs L in live ABs.
- Slider and curve stay — both plus. Define lanes: slider vs RHH backfoot/away, curve as the 0-0 and chase pitch vs LHH.

STRENGTH & WORKOUTS

- Hold velo through 150 IP: the 2027 plan is a full AA/AAA rotation year. Base conditioning and arm-care volume before any velo work.
- Lower-half stability tied to the mocap read — the command fix is physical first.

BULLPENS & PLAN

- Sinker command pens to the arm-side edge — 55% zone target.
- Kick change 30% of every pen until it has a shape; chart run and velo separation from the sinker.
- Live ABs vs LHH — the split that decides whether he starts.

No public pitch tracking for High-A/AA in 2026 — results computed from every plate appearance (482). Reported arsenal from public scouting grades (FanGraphs), not measurement.
