

Transfer year from Stanford to Georgia turned a 6.02-ERA starter into a 7-0, 4.22 ERA swingman/closer with 76 K in 59.2 IP (11.5 K/9) and 5 saves for a 53-14 SEC champion. Drafted in the 8th round by Cleveland. No official pro innings. 6'7", 241 — the frame is the asset; the 30 walks (4.5 BB/9) are the tax.

2026 PROFILE no public pitch tracking at this level — results from every plate appearance; arsenal from public reports

SEASON	G/GS	IP	W-L	ERA	K	BB	NOTES
2026 Georgia (Sr)	20/3	59.2	7-0	4.22	76	30	5 SV · SEC champions · CWS t-3rd
2025 Stanford (Jr)	—/11	52.1	5-2	6.02	56	22	

WHAT WE NEED IN HAND BEFORE THE FIRST LAB DAY

- 2026 Georgia TrackMan game CSVs — first look at his shapes
- Any pen/Edgertronic video from Georgia or Cleveland's complex
- Cleveland's stated role for 2027 (relief vs. starter build)

REPORTED ARSENAL · not measured

PITCH	VELO	NOTE
Four-seam	mid 90s (reported)	shape unmeasured; 6'7" release/extension unknown
Slider	mid 80s (reported)	primary breaking ball
Changeup	—	third pitch

WHO HE WAS IN 2026

- Strikeouts jumped with the role change:** 56 K in 52.1 IP as a Stanford starter (2025) → 76 K in 59.2 IP at Georgia mostly in relief. Short stints suited the stuff.
- Walks stayed:** 22 BB in 52.1 IP (2025) → 30 in 59.2 (2026). Roughly 11-12% of batters walked both years.
- Two years, two orgs, two roles** — Stanford rotation, Georgia bullpen, now Cleveland's development system. The offseason has to establish what he is before the org decides for him.
- At 6'7" the release and extension should be elite;** we have no measurement of either. That's the first lab session.
- No public pitch tracking for the college season;** arsenal below from public draft descriptions.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Full TrackMan + Edgertronic arsenal baseline — nothing on him is measured publicly.
- 6'7" delivery capture: extension, release height, and release-point spread (the walk number) across 30 fastballs.
- Physical assessment: hip/ankle mobility on a tall frame — the usual limiter for repeatability at that height.

PITCH SHAPES & GRIPS

- Nothing changes until it's measured.** Then: if the four-seam has ride from a high release, it's a north pitch and the slider works off it; if it's dead-zone, the sinker conversation starts.
- Define the slider as gyro or sweeper — and build the changeup as the LHH pitch for a starter's path.
- Pitch-mix plan for the role Cleveland gives him (likely relief first).

STRENGTH & WORKOUTS

- Pro-season base: college max ~60 IP; build toward 80-100 as a reliever or 120 as a starter.
- Stability and mobility for the frame — velo will come from sequencing, not mass, at 241 lb.

BULLPENS & PLAN

- Measurement pen first (every grip, every pitch).
- Strike pens: 0-0 fastball to a target — 65% strikes before shape work.
- Live ABs vs both sides in February; chart walks and put-away.

College season stats from Georgia Athletics. No public pitch tracking.
