

Full AAA starter's season (106.1 IP, 28 G/21 GS) at 5.84 ERA with 19 HR, 17.0 K% and 8.8 BB%, then a September look in Miami. Seven pitches from a high 37° slot — the cutter and slider carry real value; the 89.6-mph four-seam and the splitter give it back. The season was a velo problem wearing a seven-pitch costume.

MOVEMENT (in) · dashed = MLB LHP avg

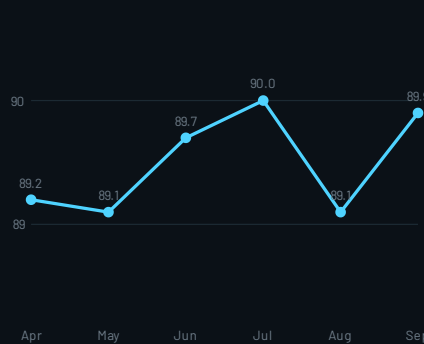

USAGE BY BATTER SIDE

VELO TREND

FASTBALL VELO BY MONTH (mph)

WHO HE WAS IN 2026

- Four-seam: 89.6 mph, 15.8" IVB / 9" run, 2,090 rpm, 5.9 ft release.** Ride is fine for the slot; velo isn't. 21.6% whiff, 42% hard-hit, 6 HR, 20 BB — most walks of any pitch. Velo was flat all year (89.1-90.0 by month).
- Cutter is the best pitch by value:** 85.9, 10" IVB / -2" — +1.7 RV/100, 24.7% whiff, 34% chase, .331 xwOBA. Slider (80.7, 4.6 / -9.6) is the LHH weapon: 35% usage vs L, 29% whiff, .261 xwOBA.
- Splitter is the worst pitch:** 80.7, 1,064 rpm, -1" / 9" — -2.8 RV/100, 35% zone, 41% hard. Changeup (80.8, 5" / 14" run) does the same job better: 25.5% whiff, 45% zone, 11 K.
- Curve gets called strikes, not swings:** 36% CSW but 50% hard-hit when they do swing. Fine as a 0-0 pitch, not a finisher.
- Righties: 14 of 19 HR.** He needs the cutter/changeup plan vs RHH to be the default; four-seam usage vs R was 27.5%.
- MLB sample (65 pitches):** 4 IP, cutter got hit (75% hard), sinker showed 16" run at 89. Too small to grade; it confirms the velo ceiling.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Velo capture is the whole offseason: 5.9 ft release at 37° with only 5.9 ft extension on a 82" frame — measure stride length, lead-leg block and trunk stack to find the 2 mph.
- Compare cutter and four-seam release; the cutter (his best pitch) should be the template the four-seam matches.
- Baseline shoulder ER/IR and hip ROM — a 106-IP year at 28 needs a recovery plan, not just a build.

PITCH SHAPES & GRIPS

- Drop the splitter.** Seven pitches → six. The changeup already does the arm-side job with +2" more run and a 10-point better zone rate.
- Four-seam: add velo before anything else,** and keep it up (VAA -5.0 plays north). Usage vs RHH capped at 25% until it's 91+.
- Cutter to 25%+ overall** and the first pitch vs RHH; slider stays the LHH putaway.
- Sinker (11.5" IVB / 14" run) is fine as a change-of-eye level vs LHH only.

STRENGTH & WORKOUTS

- Velo block: strength + intent throwing through January with a 91.5 mph pen target by February.
- Body composition and posterior-chain — he throws a lot of innings at a slot that taxes the shoulder; scap/RC volume every week.
- Long-toss/weighted-ball program only after the mocap says the arm path isn't the limiter.

BULLPENS & PLAN

- Pens: cutter/changeup command vs RHH first (14 HR to righties), four-seam north second, curve for 0-0 strikes third.
- Track HR-risk pitches: anything 89 or under, middle-third, gets flagged and counted.
- Live ABs vs RHH; success = under .340 xwOBA and 20%+ whiff across 40 PA before we credit any change.

Arsenal combines AAA (1,751) and MLB (65) tracked pitches. RV/100 and xwOBA weighted across both; Stuff+/Location+ from the MLB sample only (small).
