

No 2026 pitching to snapshot. A second shoulder surgery (September 2025, after the September 2024 labrum repair) wiped out the season on the mound; he returned June 13 as a designated hitter in the Arizona Complex League (5 G, 17 PA, .357, 1 HR). Pre-injury he was 97-98 from the left side. The Giants have said the mound isn't closed. This page is a return-to-throwing plan, not a season review.

2026 PROFILEno public pitch tracking at this level — results from every plate appearance; arsenal from public reports

SEASON	G/GS	IP	W-L	ERA	K	BB	NOTES
2026 ACL Giants (DH only)	5 G	0	—	—	—	—	17 PA · .357 · 1 HR · returned June 13 from shoulder surgery
2025 —	0	0	—	—	—	—	Sept 2025 shoulder surgery (second; labrum Sept 2024)

- WHAT WE NEED IN HAND BEFORE THE FIRST LAB DAY
- Surgical/rehab timeline and current throwing-program stage from Reggie or his agent
 - Any pre-injury TrackMan (2023-24 Eugene/Richmond) as the baseline to rebuild toward
 - Clearance status from the Giants' medical staff before any mound work

REPORTED ARSENAL · not measured

PITCH	VELO	NOTE
Four-seam	97-98 pre-injury	current velo unknown
Slider	—	pre-injury secondary
Changeup	—	under-developed

- WHO HE WAS IN 2026
- Timeline:** Sept 25, 2024 labrum surgery (10-12 months) → Sept 16, 2025 second shoulder procedure → June 13, 2026 return as a DH only.
 - What's on record from the mound:** 97-98 mph fastball pre-injury, a slider, and a changeup that never got reps because the arm never stayed healthy long enough.
 - What we don't have:** any 2025 or 2026 pitch tracking, and no public statement of the current throwing program stage.
 - Age 25 — the window is real but not long.** Two shoulder surgeries in 12 months means the mocap and the physical assessment decide the plan, not the calendar.
 - Bat is a live option the org is using** — 1 HR in 17 PA. It doesn't change our lane; it does change how much throwing load the shoulder can take on top of hitting.

OFFSEASON PLAN — WHAT WE FIXevery item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Nothing on a mound until the assessment clears it: shoulder ER/IR, scap control, labral-stress positions measured on the full physical form.
- First captures are flat-ground and long-toss on Theia — arm path, shoulder abduction and layback measured against a healthy-LHP model.
- Monthly re-capture; the plan advances on measured shoulder tolerance, not weeks.

PITCH SHAPES & GRIPS

- No shape work in Phase 1. Phase 2 (once mound-cleared): fastball only, measured for velo and ride; shapes come back when velo is 94+.
- Changeup enters before the slider — lower stress, and the pitch he never had.

STRENGTH & WORKOUTS

- Shoulder program is the offseason: rotator cuff endurance, scap stability, posterior-chain, with hitting load accounted for in the weekly total.
- Return-to-throw progression (flat ground → mound) gated by the assessment, with velo caps at each step.

BULLPENS & PLAN

- No bullpens until Phase 2. Then 15-pitch fastball-only pens twice a week, charted for velo and command; live ABs are a spring conversation.

Injury and return details from public reporting (MLB.com, NBC Sports Bay Area, Wikipedia); ACL hitting line from the MLB Stats API. No pitch data exists for 2025-26.
