

101.2 innings at Indianapolis in a swing role: 6.02 ERA but a 4.59 FIP on a .338 BABIP and 63.5% strand rate — the results were worse than the pitching. Six pitches from a 28° slot; the cutter, sweeper and curve are real, and the 92-mph four-seam is the pitch that gave back the value (−1.8 RV/100, .396 xwOBA, 24 BB, 5 HR).

USAGE BY BATTER SIDE

VELO TREND

WHO HE WAS IN 2026

- **Four-seam is the weak link:** 92.4 mph, 15.6" IVB / 11" run — average ride, below-average velo, 16.8% whiff, 45% hard-hit, 24 of his 42 walks. He already cut it to 27.5% usage; the plan is to keep cutting.
- **Cutter is the best pitch by value (+2.0 RV/100):** 86.9, 7" IVB / −4", 59% zone, 27% whiff, 33% CSW. Usable early and late vs both sides.
- **Sweeper (81.5, 6" / −13") is the RHH putaway:** 40% whiff, 26 K, 1 BB, .233 xwOBA; 37% usage vs R. Curve (79.2, −9 / −14) is the LHH version: 44% whiff, 24 K, but 40% zone.
- **Splitter (85.4, 1195 rpm, 3" / 9") is the LHH chase pitch:** 35% chase, .239 xwOBA, 18 K — but 39% zone and −2.1 RV/100 because it's a ball too often.
- **Sinker doesn't miss bats (8% whiff)** and the lefty-heavy usage split (275 of 467 batters were LHH) means the four-seam/sinker got exposed against them: .272 AVG, 10.9 BB%, 6 HR vs L.
- Velo was flat and healthy all year (91.9–93.0 by month) across 101 innings.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Velo capture: 92.4 with 6.5 ft extension from a 28° slot — find the 1–2 mph in the lower half; the arm action is already efficient.
- Match the splitter release to the four-seam (both 5.5 ft) and check for the tipping cue that lets hitters take it — 39% zone with 35% chase means they only swing when it's a ball.
- Baseline post-101-IP shoulder/elbow ROM; first full swing-role season.

PITCH SHAPES & GRIPS

- **Four-seam to 20% and north only;** cutter becomes the primary fastball (30%+). Ride target 17+ IVB if the mocop finds the slot can go higher.
- **Splitter zone rate 39% → 48%** — it's the LHH answer; it just needs to start in the zone.
- Sweeper and curve stay as-is: 40%+ whiff each. Sinker gets cut to a show-me pitch or dropped.

STRENGTH & WORKOUTS

- Velo block through January: 92.4 → 94 turns a swingman into a rotation arm. Posterior chain, sprint work, intent throwing.
- Durability programming for 130+ IP — he threw 101 as a swingman without a velo dip, which is the base to build on.

BULLPENS & PLAN

- Cutter-first pens: first-pitch cutter for strikes, four-seam up as the change of eye-level.
- Splitter pens charted for zone% — 10 of every 20 must be strikes.
- Live ABs vs LHH (the exposed split) — success = under .320 xwOBA and BB% under 9 over 40 PA.
