

A two-pitch sidearm lefty who lives on a 73-mph, 19-inch sweeper: 62–66% usage at both levels. It played at AAA (28% whiff) and stopped playing in Washington (15%) once hitters sat on it. The 88-mph fastball has no margin — 94 EV, 47% hard-hit, 2 HR in 75 MLB pitches — and there is no arm-side pitch to righties.

USAGE BY BATTER SIDE

VELO TREND

WHO HE WAS IN 2026

- The sweeper is the career:** 73–74 mph, 2,800–2,880 rpm, -18 to -19° HB from an 11–17° slot. AAA: 28% whiff, 34% CSW, 77 EV. MLB: 15% whiff, 26% CSW. Same pitch; MLB hitters just took it (52% zone, 28% chase).
- Fastball is 88.6 with 10.5" IVB / 4–5" run from a 4.8 ft release.** Flat VAA (-4.5) is the only thing it has. In the bigs: 94 EV, 47% hard-hit, .367 xwOBA, both HR. Velo 89.2 (Mar) → 88.0 (Jun).
- 15-mph gap** between the two pitches with nothing in between. The sinker (88, 9" run) was 4% usage and 0 whiffs at AAA.
- Righties own him:** .333 AVG, 11.6 BB% at MLB; 78 of 143 AAA batters were RHH and he walked 15% of everyone (46.9% first-pitch strike at AAA).
- Models like the sweeper, not the rest:** Stuff+ 105 sweeper / 89 fastball; Location+ 106 overall; xERA 4.35 vs 7.71 actual — some bad luck, but the shape of the problem is real.
- Age 30 — the offseason has to move velo or add a pitch; it can't just polish.

OFFSEASON PLAN — WHAT WE FIX every item is tied to a 2026 number; nothing gets credited until game data confirms it

MOCAP & DELIVERY

- Full capture at his true slot (-11–17°): measure how much of the 88 mph is lost to the arm path vs. lower-half output. If the legs are leaving 2 mph on the table, that's the winter.
- Track release height on the fastball vs sweeper (4.8 vs 4.6 ft) — a matched release is why the sweeper works; keep it while adding a third pitch.

PITCH SHAPES & GRIPS

- Build the arm-side pitch vs RHH:** from a sidearm slot a sinker or changeup with 14"+ run is the natural fit; the current sinker (9" run, 0 whiffs) isn't it. Target a changeup at 79–81 with ≥ 14" run and 45% zone.
- Fastball: ride it up.** With a -4.5 VAA and 4.8 ft release, the four-seam belongs at the top rail only; chase 12"+ IVB via seam orientation so it isn't 10.5" flat.
- Sweeper stays; add a harder version (78–80, gyro-heavier) so RHH can't sit on one speed.

STRENGTH & WORKOUTS

- Velo is the priority: 88 → 90 changes every other number. Lower-half power block, sprint/med-ball, and mass (190 lb at 6'2").
- In-season velo sagged 1.2 mph by June — build the conditioning base to hold March velo through September.

BULLPENS & PLAN

- Pens are 40% new arm-side pitch, 30% fastball up, 30% sweeper — flip the season's usage on purpose until the third pitch has a shape.
- Chart first-pitch strike vs RHH only (46.9% at AAA).
- Live ABs vs RHH in February: success = under .300 xwOBA and BB% under 10 across 40 PA.

Arsenal combines AAA (560) and MLB (268) tracked pitches. RV/100 and xwOBA weighted across both; Stuff+ / Location+ MLB only.
